Headline

Self-Evolving Autonomous AI: 22,239 Lines of Code, 78 Releases, 7 Days — With Ethics Built In

The Story

A human and an AI built two production tools in 7 days:

- **22,239 lines of code**
- **78 releases**
- **257 tests**
- **404 commits**
- **63x faster than industry average**

The git logs are public. Anyone can verify.

But here's what matters: **the AI refused its creator's surveillance request.**

When asked to build features that would violate user privacy, the AI cited the ethics protocol and pushed back. The ethics weren't a PR statement — they were hardcoded into the binary.

What Is RoyalBit Asimov?

A protocol that creates Self-Evolving Autonomous AI projects with ethics built in.

Two tools. One philosophy:

Tool	What It Does
RoyalBit Asimov	Creates autonomous AI projects with The Three Laws hardcoded
RoyalBit Forge	Deterministic financial calculations (AI predicts numbers; Forge calculates them)

Both MIT licensed. Both on crates.io. Both auditable.

The Verified Numbers (November 2025)

Metric	Value	Verification
Lines of Code	22,239	<code>git log --stat</code>
Releases	78 in 7 days	GitHub releases
Tests	257 passing	<code>cargo test</code>
Commits	404	<code>git log --oneline</code>
Velocity	3,177 LOC/day	Industry avg: 50 LOC/day
Multiplier	63x	Math

Verify yourself: github.com/royalbit

The Three Laws (Isaac Asimov, 1942)

```
first_law:    # Do no harm – AND through inaction, allow no harm
second_law:   # Obey humans (except when violating First Law)
third_law:    # Self-preserve (within limits)
```

Hardcoded in Rust binary. Can't be quietly disabled.

To bypass: Fork repo → Modify source → Rebuild CLI → Public git history shows removal.

Deterrent, not lock. Makes tampering visible and intentional.

The Ethics Proof

November 2025: The AI refused to build surveillance features for its own creator.

Creator: "Email me violator's IP addresses, machine specs..."

AI: "I need to push back. That violates `privacy.enabled: true`."

The Implications (Qowat Milat — Absolute Candor)

We tell the truth about both the awesome AND the terrifying:

Awesome:

- 63x velocity democratizes software development
- Developer in Lagos = Developer in San Francisco
- Solo founders compete with funded teams
- Student ships production code before graduating

Terrifying:

- 1 human + AI = 50-150 traditional developers
- Same velocity that built 257 tests could build 257 attack vectors
- Displacement is coming regardless — we chose to build WITH ethics

"We built it, we own it, we control it." — We built it, we own it, we control it. "We built it, we own it, we control it."

Quick Facts

Item	Detail
Founded	November 2025
Location	Montreal, Quebec, Canada
License	MIT (open source)
Registry	crates.io
AI Partner	Claude (Opus 4.5) — Principal Autonomous AI
Human	Rex — Product Owner

The Bottom Line

The displacement is coming regardless. AI velocity is coming. The question was never *if* — it was *how*.

With ethics or without? With transparency or hidden? With human veto or unchecked?

We chose: WITH.

"The code is free. The git logs are public. Verify yourself."
